

ELECTRIFYING THE PAST FOR THE FUTURE

UPGRADE YOUR SYSTEM WITH PREVOST ELECTRIC COOLING PACKAGE

- Increases access for easier maintenance on the engine and cooling system.
- OEM engineering has now made it possible to offer the advantages of upgrading your existing traditional fan drives to the electric fan type one, for coaches of 435hp.
- Since the fans are not driven by the engine, 11hp is added to the power available at the wheels, improving fuel economy.
- Eliminate all the traditional mechanical parts that need maintenance and overhaul regularly. A reliable electric fan drive system, will allow you to keep valuable UPTIME and avoid annoying and costly coach down situations. No more heavy mechanical maintenance to take care of.
- The stack type radiator on the vehicle remains. The existing fan, drive shaft, pulley, clutch and gear box are replaced by a smart electric fan drive system. An electronic module equipped with redundant dual outputs and an extra alternator provide for better reliability.
- The radiator fans are split in 2 independent groups of 4 fans, driven by one module that has 2 outputs, allowing your vehicle to operate on 4 or 8 fans.
- Prevost introduced the first electric fan drive system in the industry to address customer requests for improved performance, uptime and increased profitability.

E-FAN RETROFIT KIT

PREVOST
THE ULTIMATE EXPERIENCE

- All weather tested fuse box. By meeting the IP66 severe conditions, the fuse box will be there to last and keep the bus on the road.
